

Ophthalmology Clinic Disinfection

Dry CE Class I micro-nebulization — safe on slit lamps, OCT devices, tonometers and laser systems.

Precision disinfection for precision medicine environments — documented every cycle.

Certified

WHY BLANC ESTATES

- 1 No Film on Optical Surfaces**
Evolyse Strong leaves no corrosive or optical film residue — validated safe on coated optical glass.
- 2 Dry Micro-Nebulization**
Particles <5um — zero condensation, zero moisture damage to sensitive optical and electronic parts.
- 3 RODAC Verification Included**
Microbiological contact cultures on surgical areas and instrument surfaces after each cycle.
- 4 Amil Care Corp Certificate**
Official Disinfection Certificate with FDA-valid documentation for your compliance records.
- 5 Immunocompromised Protocol**
Specialized protocol for post-surgical and immunocompromised patient areas.

Validated technology: same Medibios + Evolyse Strong system used in European ophthalmology departments and reviewed at Jackson Memorial Hospital.

01 Environmental Baseline
RODAC and ATP surface hygiene baseline: slit lamps, OCT, instruments, waiting areas.

02 Optical-Safe Micro-Nebulization
Medibios cycle with Evolyse Strong — <5um dry particles, no condensation, no film.

03 Post-Cycle RODAC Cultures
Cultures on critical surfaces. Results documented in compliance dossier.

04 Disinfection Certificate
Amil Care Corp USA issues the official certificate. Full pre/post dossier delivered.

Device
Medibios CE Class I — dry micro-nebulization, <5um particles

Disinfectant
Evolyse Strong CE Class IIa — FDA-listed, optical-safe

Primary verification
RODAC microbiological contact cultures

Secondary
ATP bioluminescence — 3M Clean-Trace, <10 RLU

Equipment safety
No corrosion, no condensation, no optical film residue

Certificate
Amil Care Corp USA — FDA-valid documentation
